

A COELACANTH FISH FROM THE ANISIAN (MIDDLE TRIASSIC) OF THE DOLOMITES

SILVIO RENESTO & EVELYN KUSTATSCHER

Supplementary information

APPENDIX 1 - Characters scoring of specimen PZO 625, according to the dataset by Cavin et Al (2017). According to Forey (1998) character 92: ossified ribs absent (0), present (1), the presence of few short ribs in the posterior abdominal region should also be coded (0) while only the presence of several well developed ribs covering most the abdominal region should be coded (1). In specimen PZO 626, ribs seem to be short and few in number, but their length and distribution cannot be ascertained with confidence, thus in our data matrix (Appendix 1) character 92 has been scored (?).

[illegible]
